

Lichtenau, Baden-Württemberg, March 24, 2025

LS telcom receives significant orders from the Gulf region in the electronic warfare sector

With two new orders from the Gulf region, LS telcom is strengthening its role as a partner for electronic warfare. While one project comprises a system upgrade for an existing customer, the other involves the delivery of a new electronic reconnaissance and defense system for a new customer.

Lichtenau, March 24, 2025 - LS telcom AG has received a significant order from a customer in the Gulf region. This comprises the expansion and modernization of existing hardware and software in the field of electronic warfare (EW). The aim is to further expand electronic capabilities for the early detection of threats. The order also includes components for electronic countermeasures (so-called "jamming").

A few days earlier, the French subsidiary LS telcom SAS received another military order from the Gulf region. This involves equipping a new customer with state-of-the-art electronic warfare components for electronic reconnaissance and defense.

The total order volume of both projects amounts to over 6 million euros. Implementation is expected to take place within 18 months as soon as the corresponding export licenses have been obtained.

The projects won confirm LS telecom's strategic orientation in the defense sector and underline the international demand for technologies for electronic situational awareness and protective measures in the frequency spectrum.

About LS telcom

LS telcom is a leading global provider of technologies and consulting services for the efficient use of radio frequencies in the civil and military sectors. Our focus is on optimizing spectrum management and usage to ensure interference-free, reliable and secure radio services in all markets.

The portfolio in the military sector includes integrated solutions for planning, analyzing, monitoring and coordinating the use of radio infrastructures. In addition, the portfolio includes both standardized and customer-specific optimized systems in the field of electronic warfare, including Electronic Support Measures (ESM) and Electronic Counter Measures (ECM). These systems are used for radio reconnaissance - with stationary, mobile, portable and drone-based platforms - as well as to defend against radio threats through targeted jamming measures, for example to protect against attacks inland, such as convoy protection.

The mySPECTRA for Defense software solution, which was specially developed for military applications and is already being used by the armed forces in Australia and within NATO, is used to coordinate radio spectrums and communication processes.

Our customers in more than 100 countries include the military, security services, civilian regulatory authorities, mobile phone, operating and broadcasting network operators, ministries, authorities and organizations with security tasks as well as companies from the traffic, transport, utility and industrial sectors.

LS telcom has a worldwide network of 13 branches and also has partner companies and representative offices in many countries. The headquarters of LS telcom AG are located in Lichtenau, Baden, Germany. LS telcom AG has been listed on the German Stock Exchange under ISIN DE 0005754402 since 2001.
